PROFESSIONAL SUMMARY

Final-year Computer Science student with hands-on experience in full-stack development, machine learning, and cloud platforms (AWS, Azure, GCP). Proven ability to design and deploy end-to-end applications across web and mobile using the MERN stack, Python frameworks, and deep learning pipelines. Seeking roles in Software Engineering, ML/AI Engineering, Full-Stack Development, or Cloud Architecture where I can drive scalable, data-driven solutions.

TECHNICAL SKILLS

Languages:	Python, JavaScript, Java, C++, HTML5, CSS3
Frameworks:	React.js, Node.js, Express.js, Django, Flask, React Native
Databases:	MongoDB, MySQL
Cloud & DevOps:	AWS (EC2, S3, Lambda), Microsoft Azure, Google Cloud Platform, Git, Jenkins, CI/CD Pipelines
ML & AI:	Scikit-learn, NLTK, Pandas, NumPy, Deep Learning, Computer Vision, Logistic Regression, SVM
Domains:	Full-Stack Development, Machine Learning, REST API Design, UI/UX Design, Cloud Architecture

EXPERIENCE

Machine Learning Intern IBM Skills Build	2024
- Designed and implemented a sentiment analysis pipeline using Logistic Regression and SVM models trained on 100+ labelled datasets, achieving improved classification accuracy through systematic hyperparameter tuning with GridSearchCV. - Engineered end-to-end text preprocessing workflows using NLTK (tokenisation, stopword removal, lemmatisation) and Scikit-learn TF-IDF vectorisation, reducing noise in training data and improving model generalisation. - Optimised model performance by benchmarking multiple algorithms (Naive Bayes, Logistic Regression, SVM) and selecting the best-performing configuration, resulting in a measurably higher F1-score on held-out test sets. - Documented findings, model evaluation metrics, and deployment recommendations using Pandas and Matplotlib, delivering a structured report to the IBM mentorship team.	

PROJECTS

NailAI — Nail Disease Detection App Team Project	React Native · Python · Deep Learning · MySQL
- Architected and developed an Android application that detects nail diseases from photos using a custom deep learning model (CNN), enabling early diagnosis without clinical visits. - Built the cross-platform mobile frontend with React Native and designed a RESTful API backend in Python (Flask), integrating MySQL for patient and result storage. - Trained and validated the CNN model on a curated image dataset with data augmentation techniques to improve generalisation across skin tones and lighting conditions.	
Student Skill Finder — Developer Portal Team Project	MERN Stack · REST API
- Designed and built a full-stack portal enabling faculty and peers to search and filter students by technical skills, project domains, and availability using the MERN stack (MongoDB, Express.js, React.js, Node.js). - Implemented RESTful API endpoints with advanced query filtering and indexing in MongoDB, significantly reducing search response latency compared to a naive full-collection scan. - Delivered a responsive, accessible UI using React.js with component-level state management and dynamic skill-tag filtering.	
Sentiment Analysis — ML Model Individual Project	Python · Scikit-learn · NLTK
Built and compared Logistic Regression and SVM classifiers on 100+ text datasets to classify sentiment polarity (positive / negative / neutral), applying TF-IDF feature extraction and cross-validation for robust evaluation.	

- Produced detailed performance analysis (precision, recall, F1, confusion matrix) using Matplotlib and Seaborn to communicate model trade-offs.

Netflix Clone — Streaming UI | Individual Project

React.js · HTML · CSS · JavaScript

- Developed a fully responsive video-streaming web application replicating core Netflix UI/UX patterns — dynamic carousels, search, and content modals — using React.js with hooks and context API for state management.
- Integrated a third-party movie database API to fetch real content metadata, demonstrating REST API consumption and asynchronous data handling.

EDUCATION

B.Tech — Computer Science & Engineering | Ramachandra College of Engineering

2022 – 2026

- CGPA: 7.5 / 10
- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Machine Learning, Software Engineering.

CERTIFICATIONS

- **AWS Academy Cloud Foundations** — Amazon Web Services
- **Data Analytics Essentials** — Cisco Networking Academy
- **Certified System Administrator** — ServiceNow
- **HTML, CSS, JavaScript & Bootstrap** — Udemy

ACHIEVEMENTS & ACTIVITIES

- **Finalist — Shastra 1.0 Coding Challenge:** Qualified among top participants in a competitive algorithmic coding challenge, demonstrating strong problem-solving under time constraints.
- **Workshop — Integrative AI in Web Application Development** (Mentorly, 6 days): Hands-on training on embedding AI/ML models into production web applications.
- **Event Volunteer — Kreya Fest:** Led promotional and logistics coordination for a college-wide technical festival, strengthening team management and communication skills.

LANGUAGES

- Telugu (Native) | English (Professional Proficiency) | Hindi (Conversational)
